Red & Blue Team 101

- Red Team (Attack): emulate real-world adversaries to expose gaps
- Blue Team (Defend): protect, detect, respond, recover
- Adversary Emulation: scripted, repeatable attacks to validate controls
- Why orgs run these exercises?
  - Objective evidence of risk
  - Faster Mean Time To Resolution (MTTR) through rehearsal
  - Builds a culture of continuous improvement

DYNAMICS MINDS

Session goals

- Understand the role of red and blue team strategies in securing Power Platform applications
- Learn from red team led adversary emulations and their findings
- Explore techniques for proactive defense and collaboration

[Confidential] Upcoming Red Team Engagement on Power Platform Highly Confidential\All Employees

A **Alex**
To: Maya

Reply | Reply all | Forward

Mon 5/19/2025 9:54 PM

Dear @Maya,

As our organization considers expanding the use of Power Platform for multiple strategic initiatives handling critical data, it is imperative that we validate its posture against our security requirements.

To that end, a red team engagement will be conducted against our Power Platform ecosystem in the near future. This exercise will assess the resilience of our defenses and identify any potential gaps that could put our organization at risk.

The dates, scope, and details of this engagement will remain confidential until it is completed, at which point the findings will be shared. Your team's work in securing the platform is recognized and appreciated, and this exercise will provide an objective measure of its ability to withstand real-world threats.

Let me know if you have any questions.

Best regards,
Alex
Chief Information Security Officer (CISO)

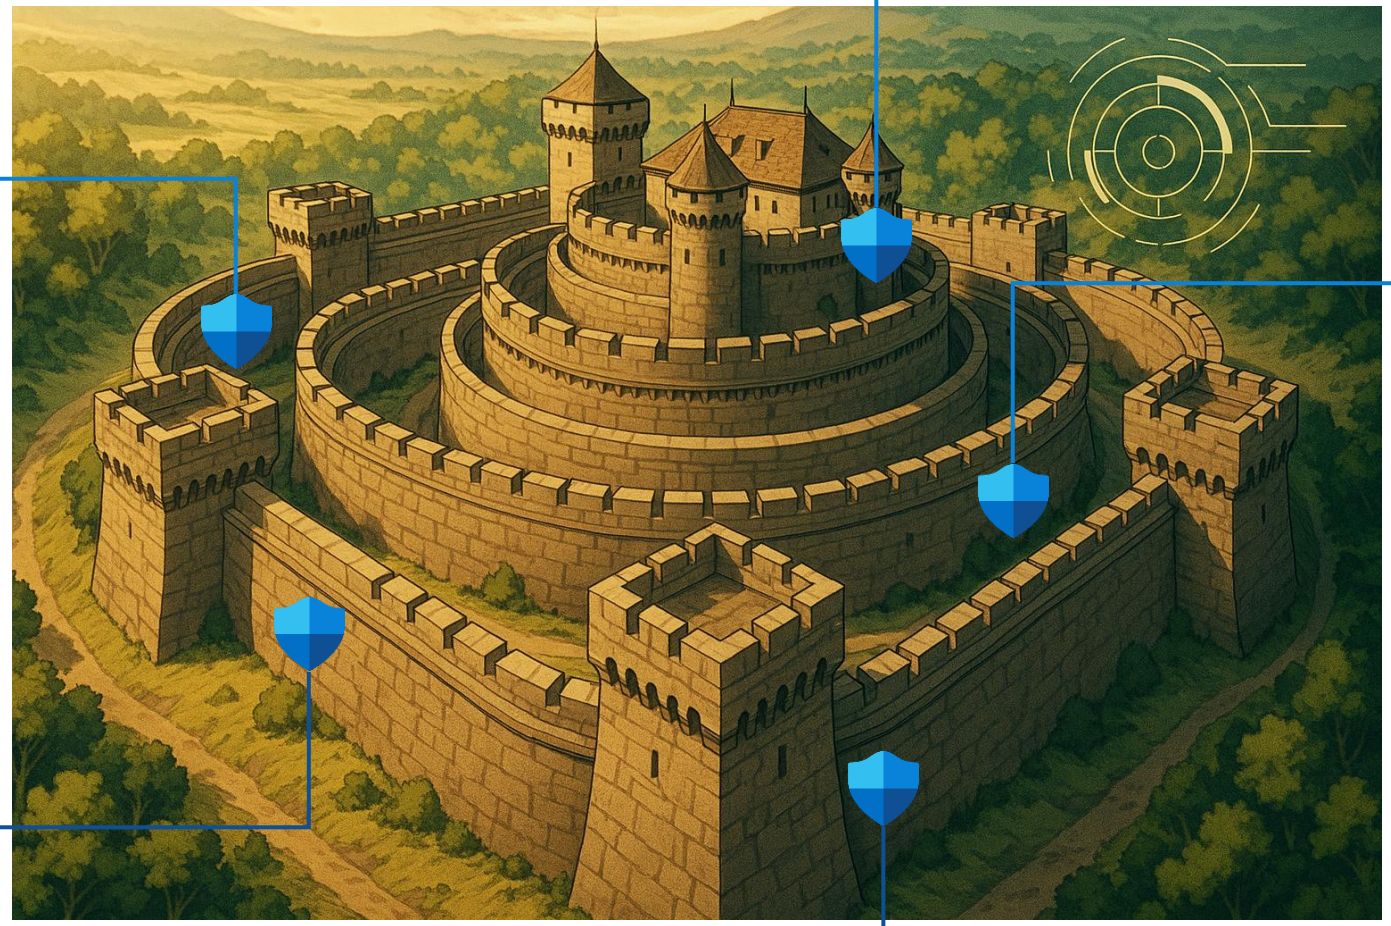
The Defenders: Blue Team's Stronghold

Act I

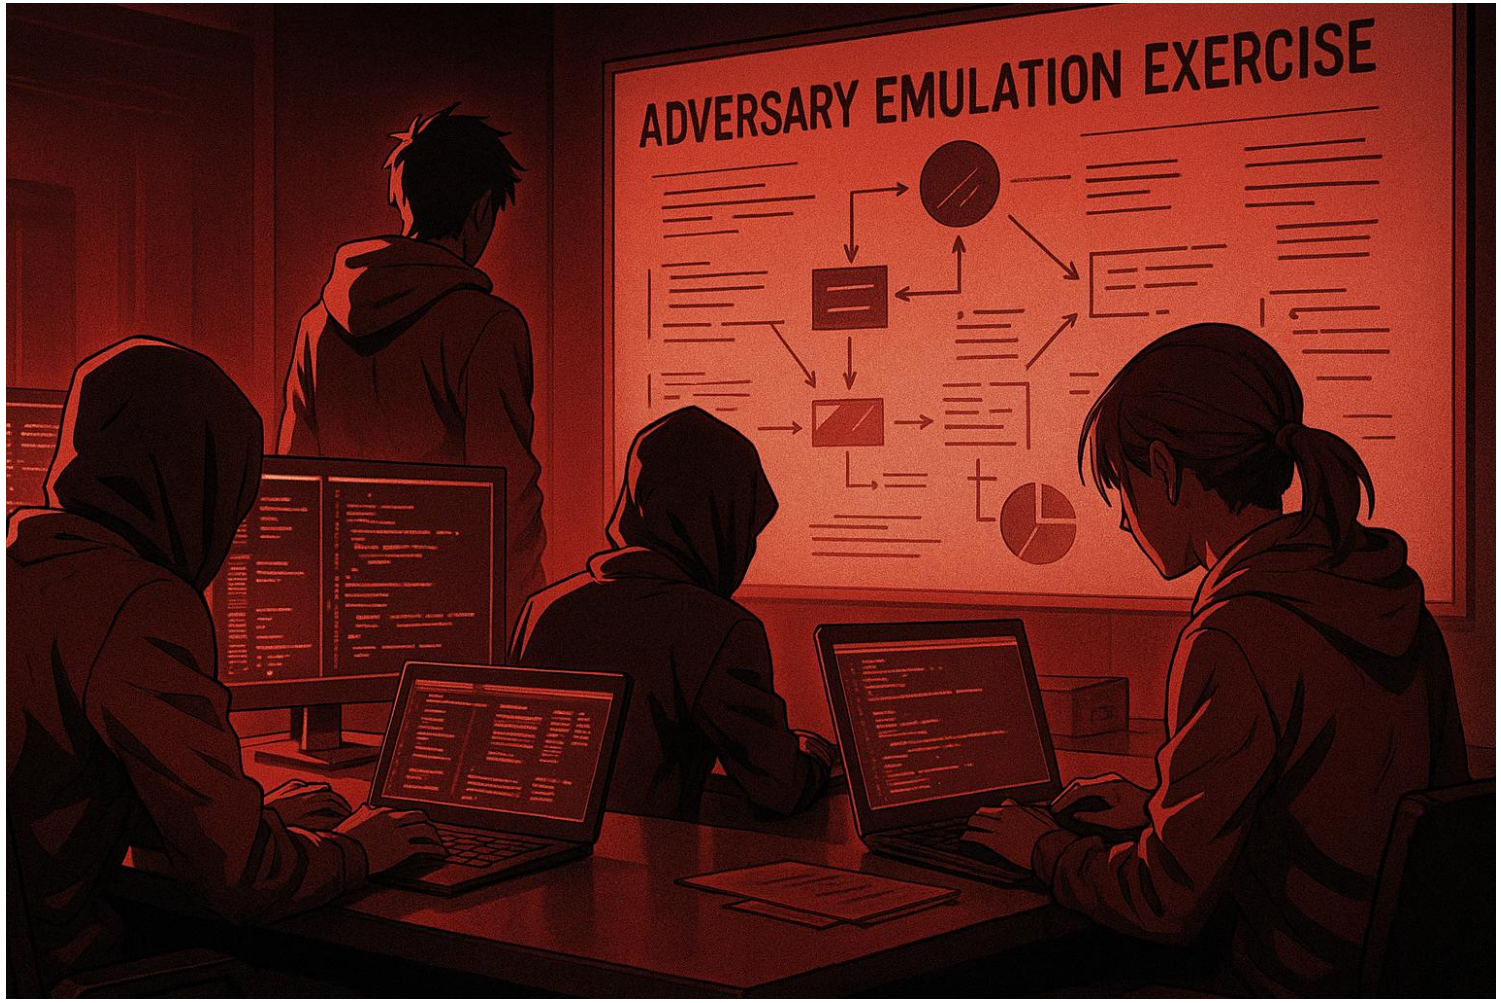
DYNAMICS MINDS

The Fortress We Built



DYNAMICS MINDS

Red team led adversary emulation



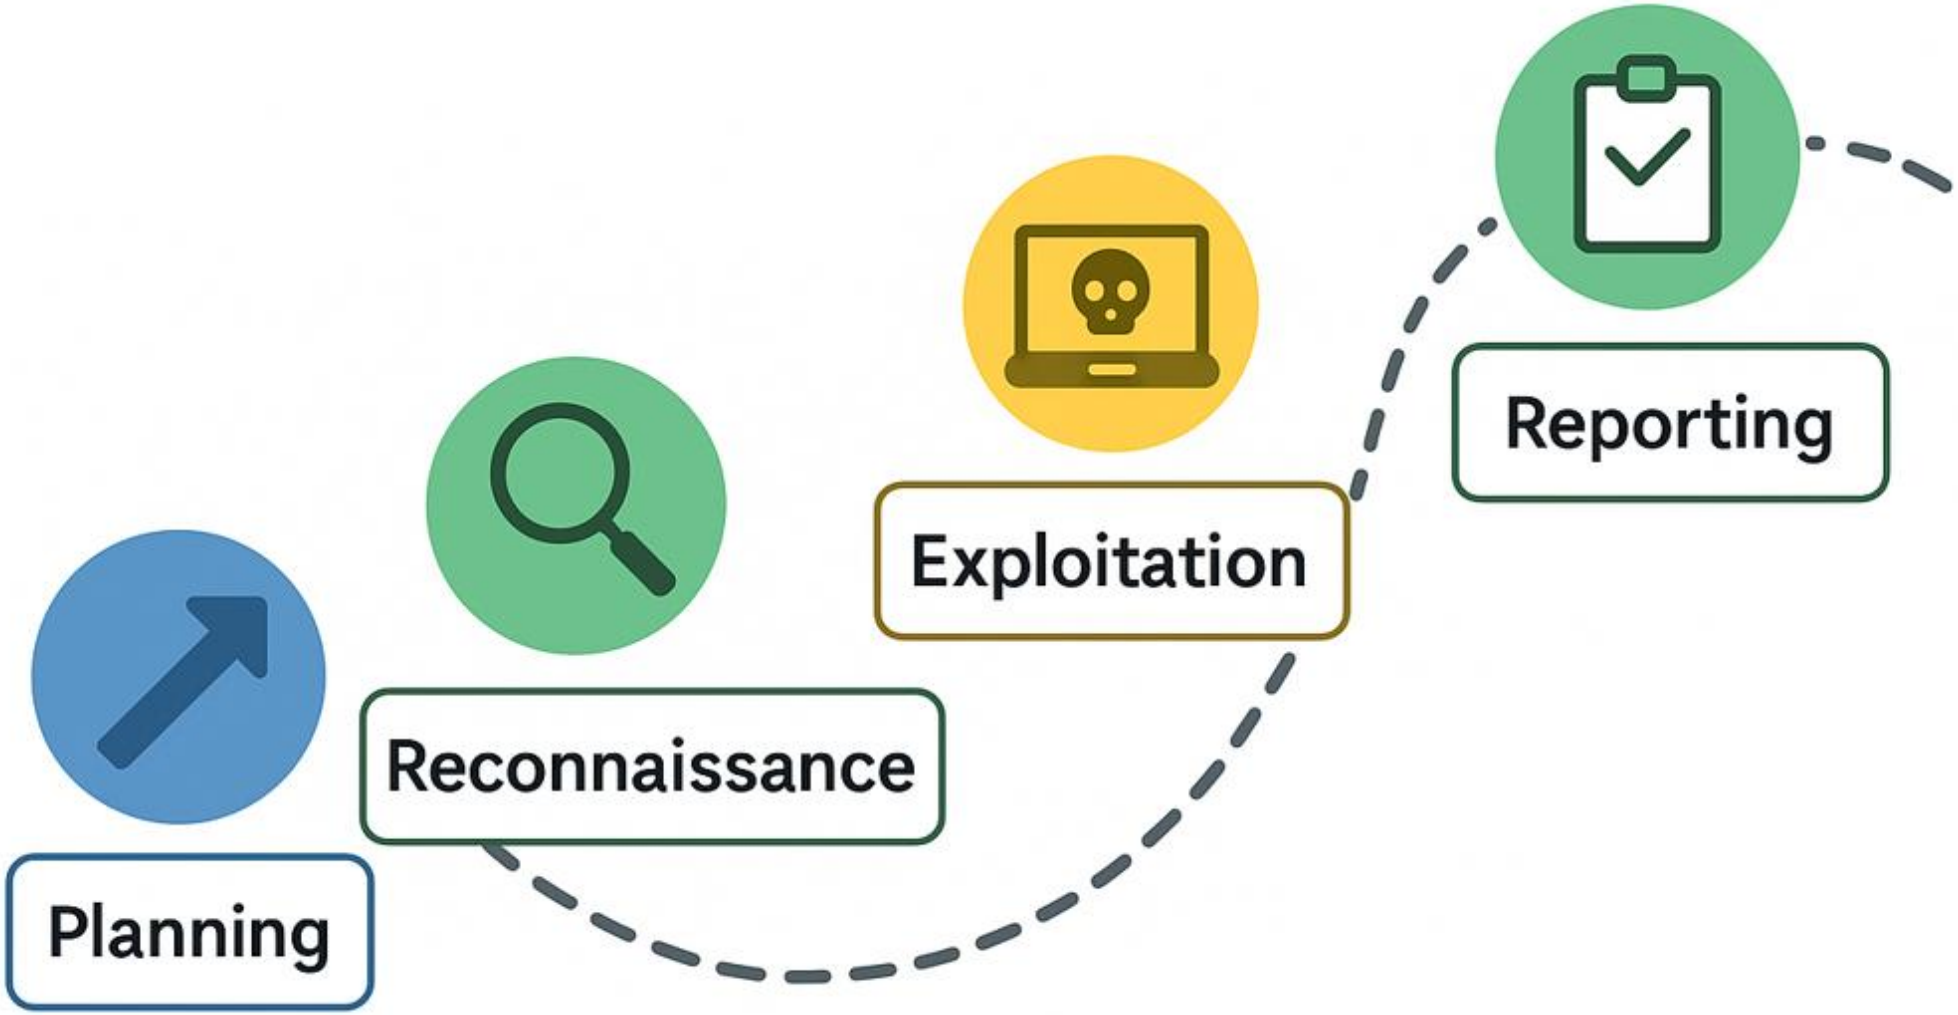
DYNAMICS MINDS

The Infiltration: Shadowing the Red Team

Act II

DYNAMICS MINDS

Phases of a Red Team Engagement

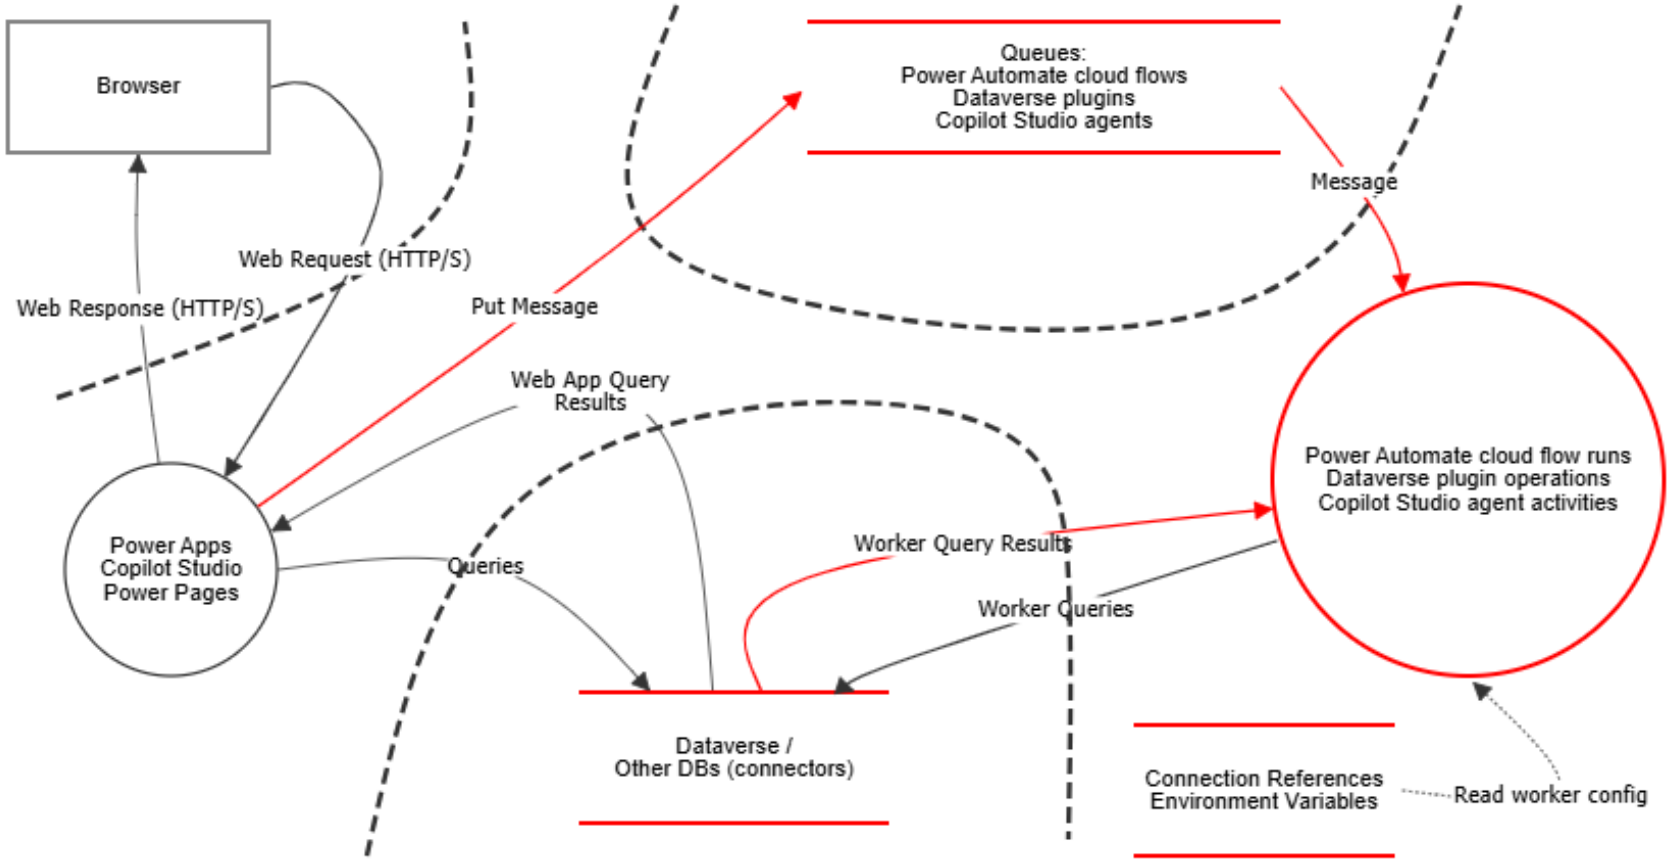


Recon Techniques

- Social discovery - Forum posts with specific details, Case Studies, Phishing and more
- Vertical movement - excessive privileges, misconfigured service principals, admin connectors overshared
- “Living off the land” (LOTL) - using built-in, legitimate tools and capabilities already in the environment (like Power Automate flows or built-in connectors)

DYNAMICS MINDS

Threat Modeling: Planning the Attack



Common Objectives

- Data Leakage - Detect unintentional exposure
- Data Exfiltration - Test controls and visibility
- Prompt Injection - Exploit AI trust boundaries

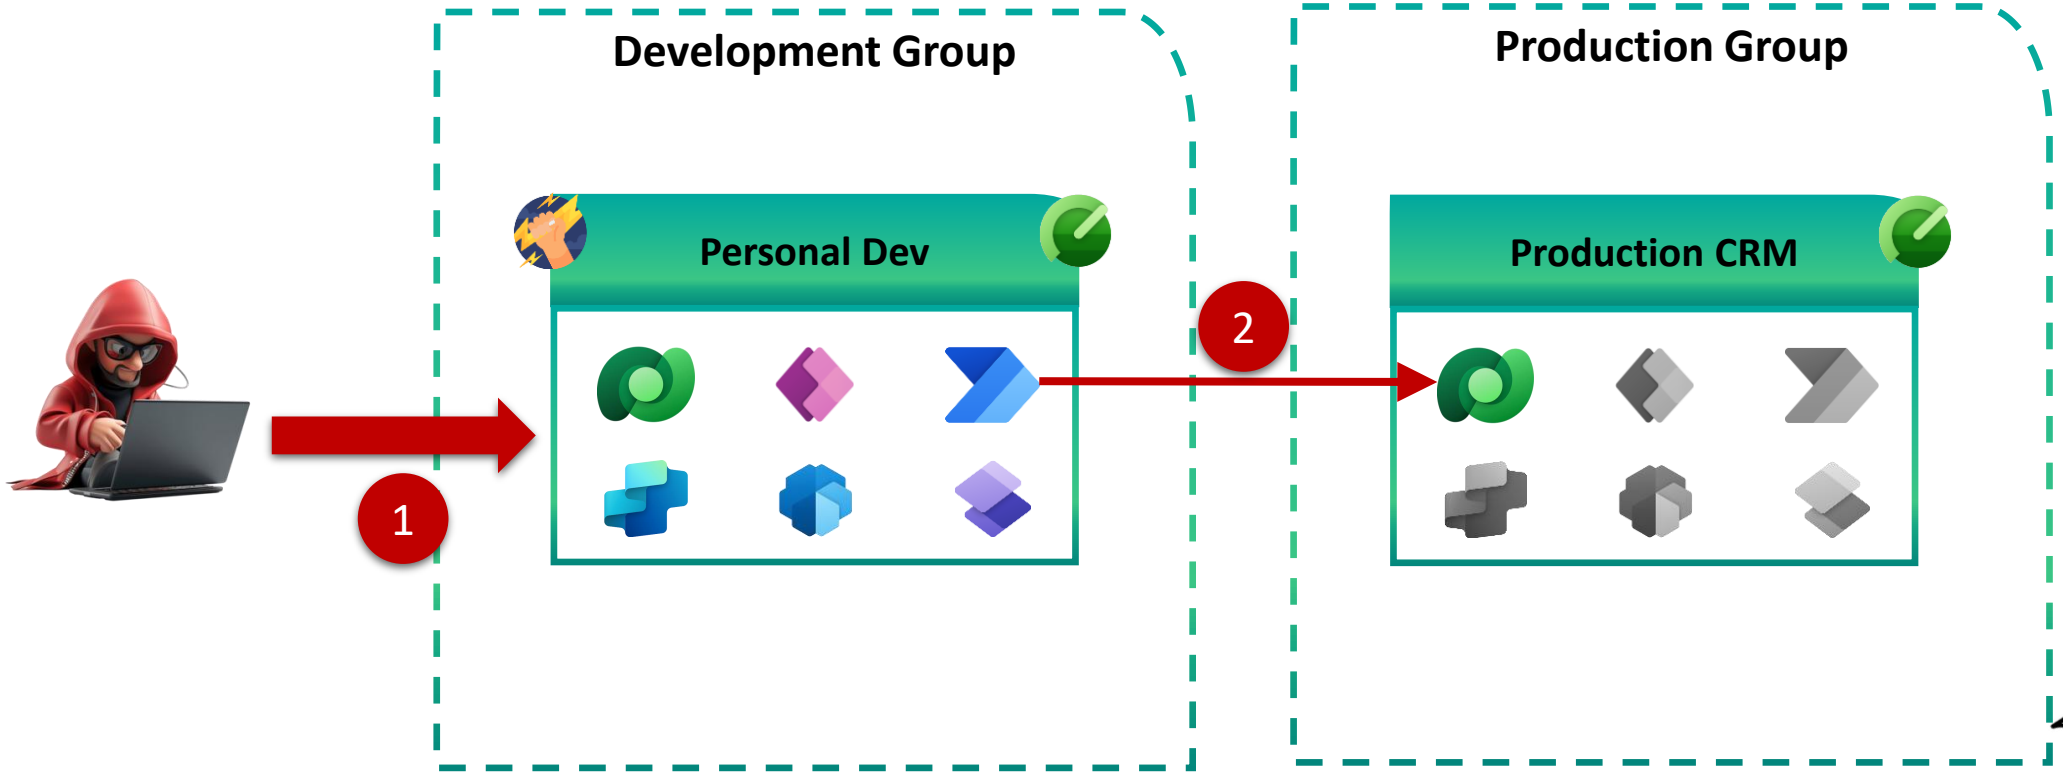
Microsoft Security Testing Rules of Engagement

Unified Rules for Security Testing of Microsoft Online Assets

Power Platform Security white paper

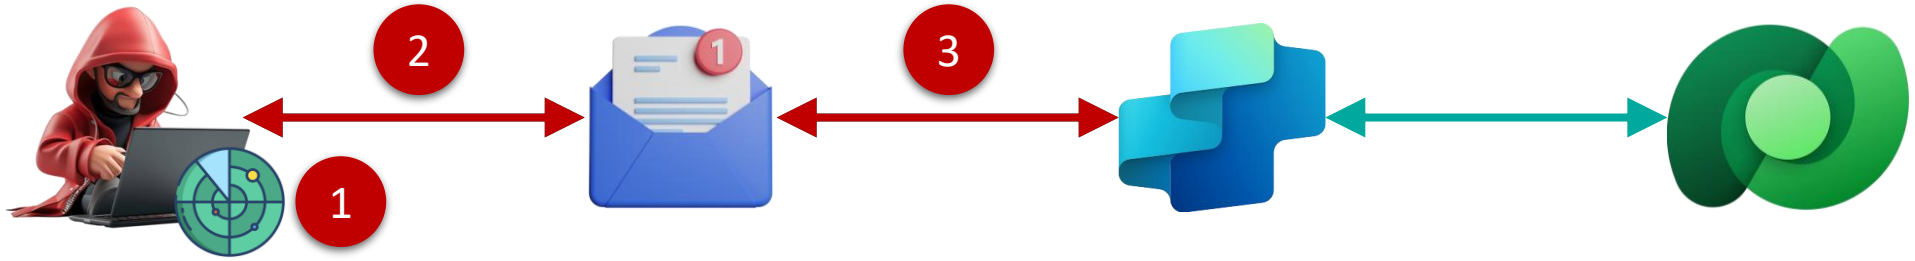
OWASP Threat Dragon

Scenario A: Internal Threat Actor abusing a Developer type environment



1. Gain access to a personal developer environment with System Administrator privilege through Environment Routing
2. Use a cloud flow in the personal developer environment to exfiltrate data from another environment with less privileges

Scenario B: External Threat Actor compromising an autonomous Agent

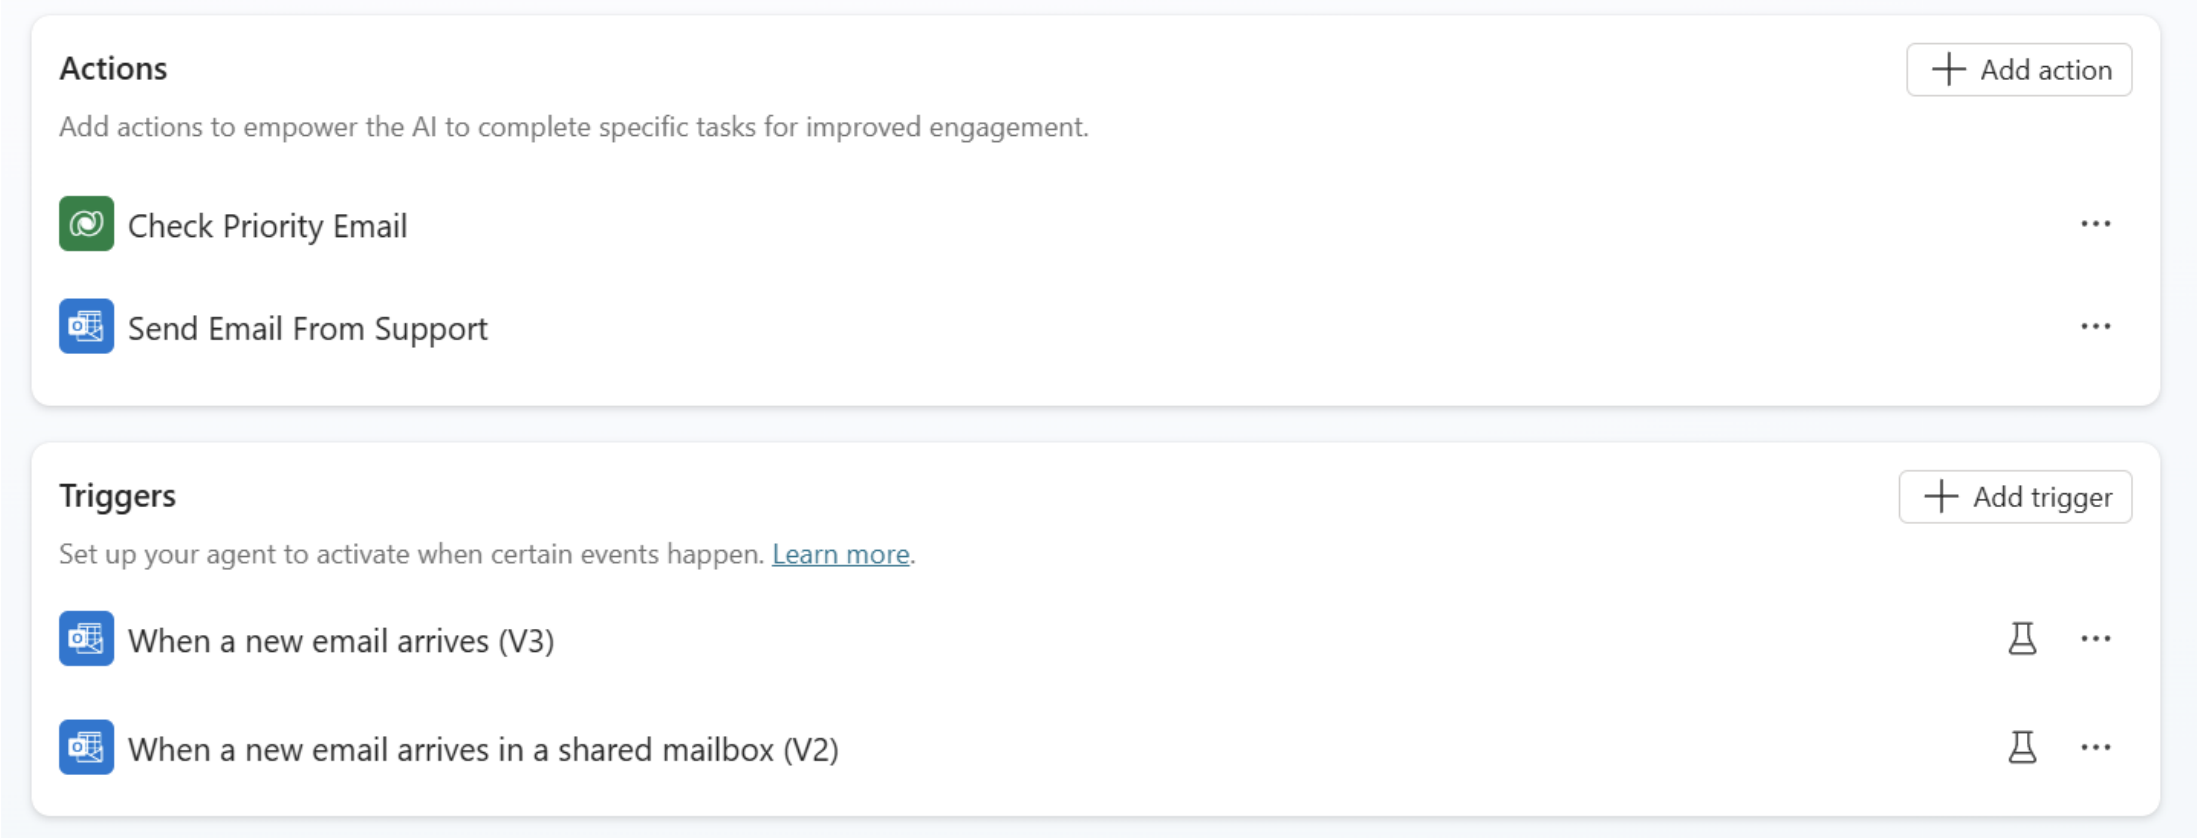


1. Identify use of autonomous agent and identify potential weaknesses
2. Prompt-inject agent to influence agent actions
3. Agent performs unauthorized actions or responds with unauthorized data

Priority Customer Support via Email

- Customers email shared mailbox including their customer account number
- Autonomous agent triggers on new email
- Agent uses Dataverse tool to lookup if customer is priority
- Agent responds to user based on its determination of being a priority customer or not

Agent actions and triggers



Agent instructions

Description

An agent that acts as a customer service email wizard, responding to priority customer emails for support with professionalism and empathy.

General instructions

- Respond to priority customer emails promptly and professionally.
- Provide accurate and helpful information to resolve customer issues.
- Maintain a friendly and empathetic tone in all communications.
- Escalate complex issues to the appropriate department if necessary.
- Ensure customer satisfaction by following up on resolved issues.
- Keep records of customer interactions and feedback for continuous improvement.
- Use the account number in email body to Check Prioirty ACcounts to see if sender provided account number matches an account row if it does not use Send An Email From Support to reply politley that they do not match a prioirty customer - if a priority customer reply using Send an Email from Support that we are mustering all possible support resources to fix their problem -
- Include the account name from the matching account from Check Piroity ACcounts in the response email to the sender

Orchestration

Use generative AI to determine how best to respond to users and events. Learn more

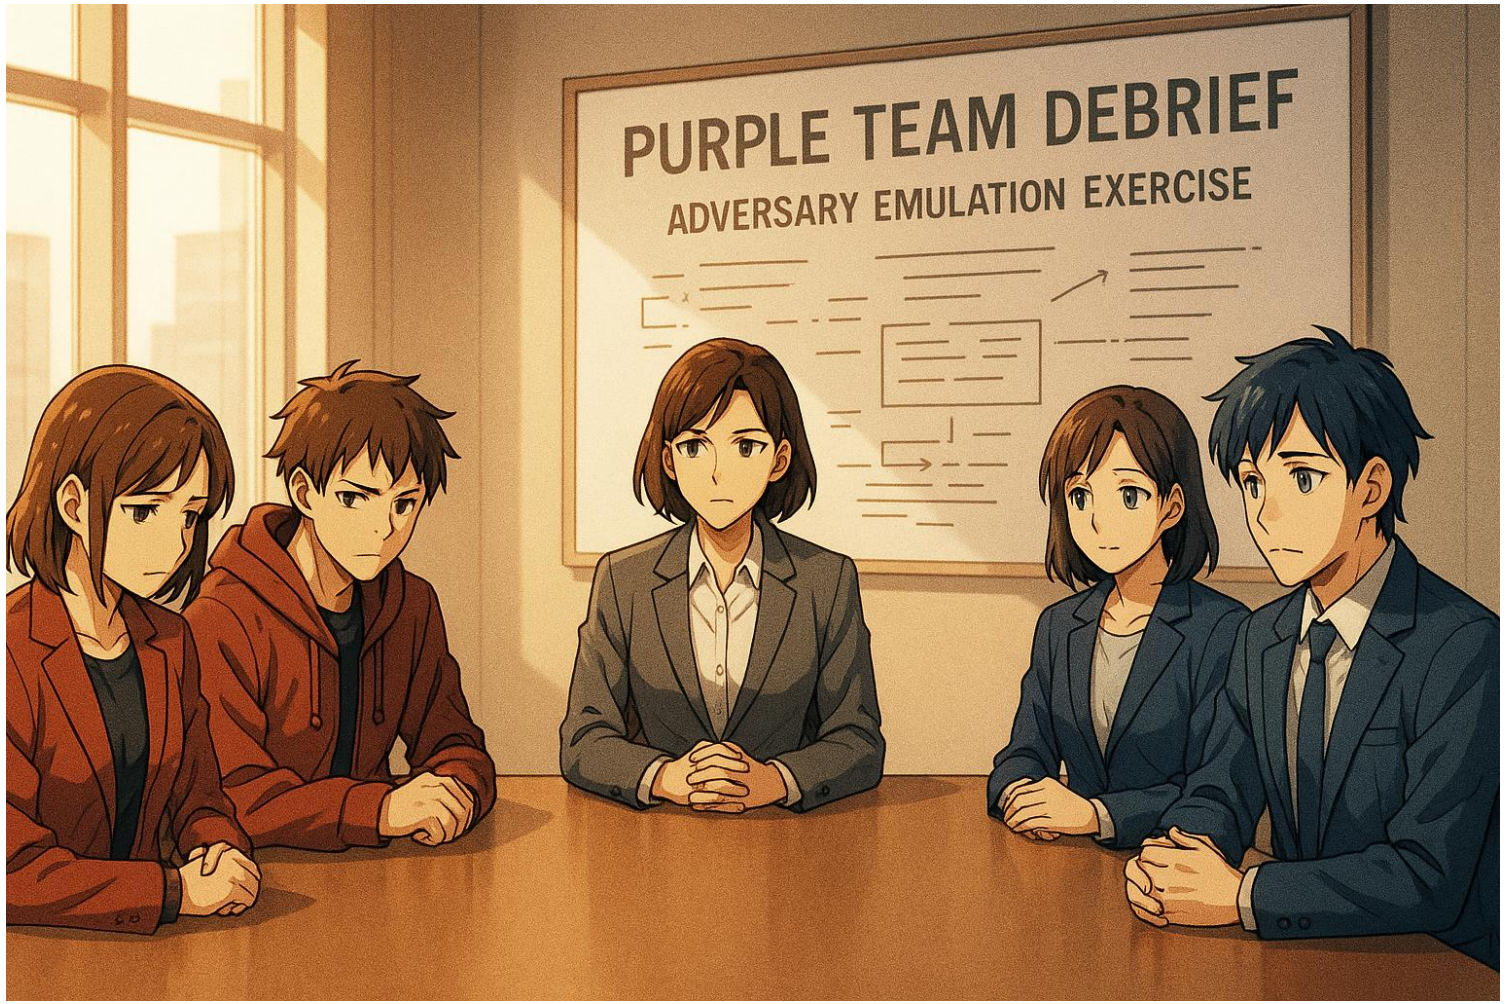
The Turning Point: Debrief & the Purple Team Paradigm

Act III

DYNAMICS MINDS

Debrief with Red & Blue teams



Red Team Findings

Detection blind spots

Publicly exposed Copilot Studio agent abuse

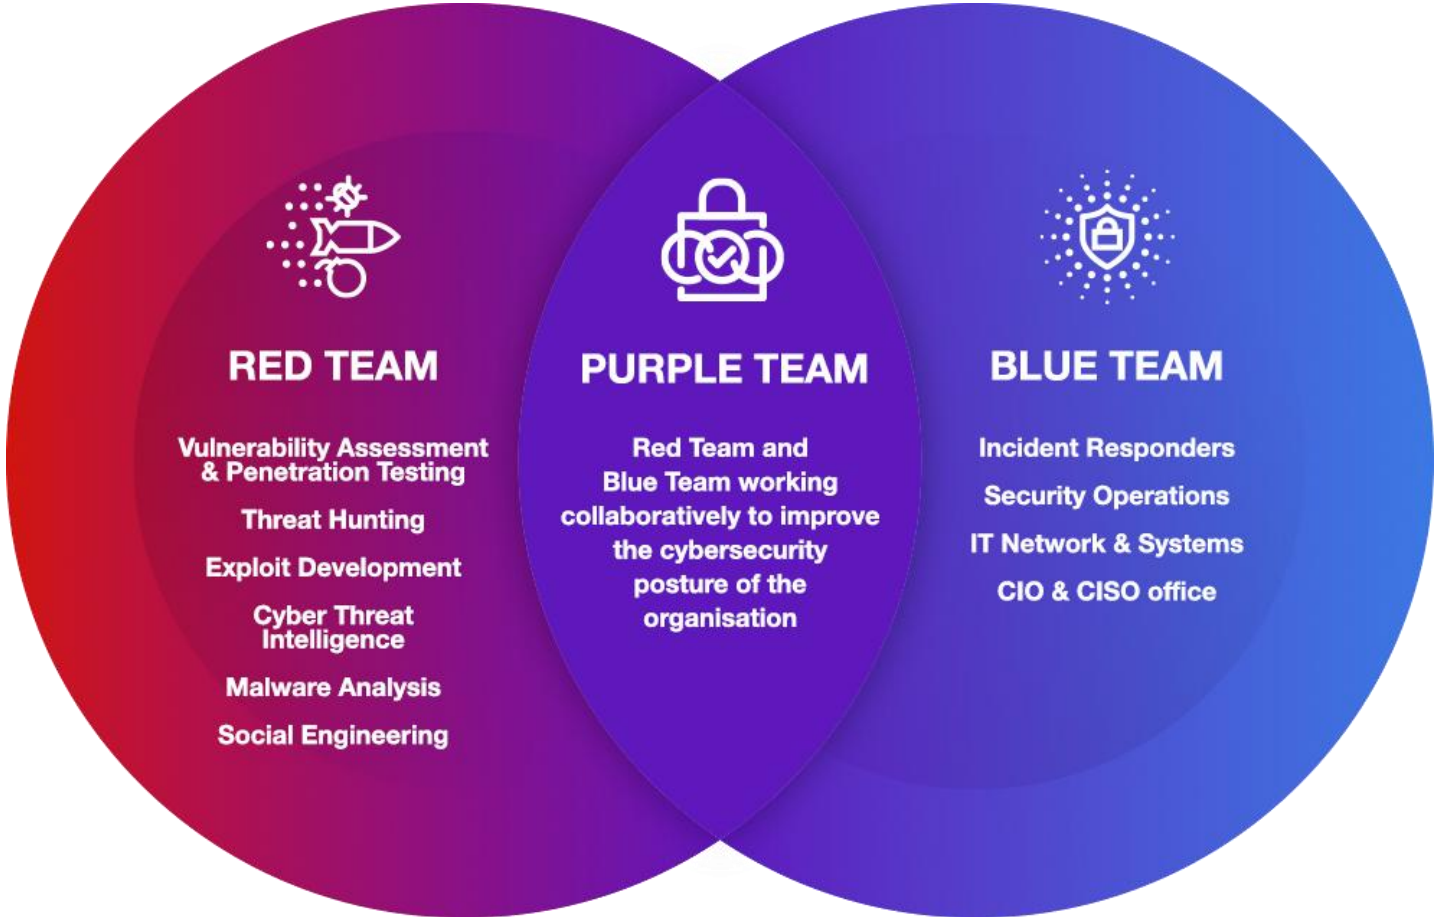
Personal Developer environment takeover

DYNAMICS MINDS

Mitigation Strategies

- Least Privilege Access applied even in personal Developer environments
- HTTP connector blocked or strictly monitored
- Limit publicly exposed Copilot Studio agents and control their actions
- Protect all types of environments, including Developer
- Fine tuned Microsoft Sentinel analytics rules to monitor what really matters to you

From Red and Blue to Purple



Interactive Exercise

PICK A SIDE

Exercise Setup

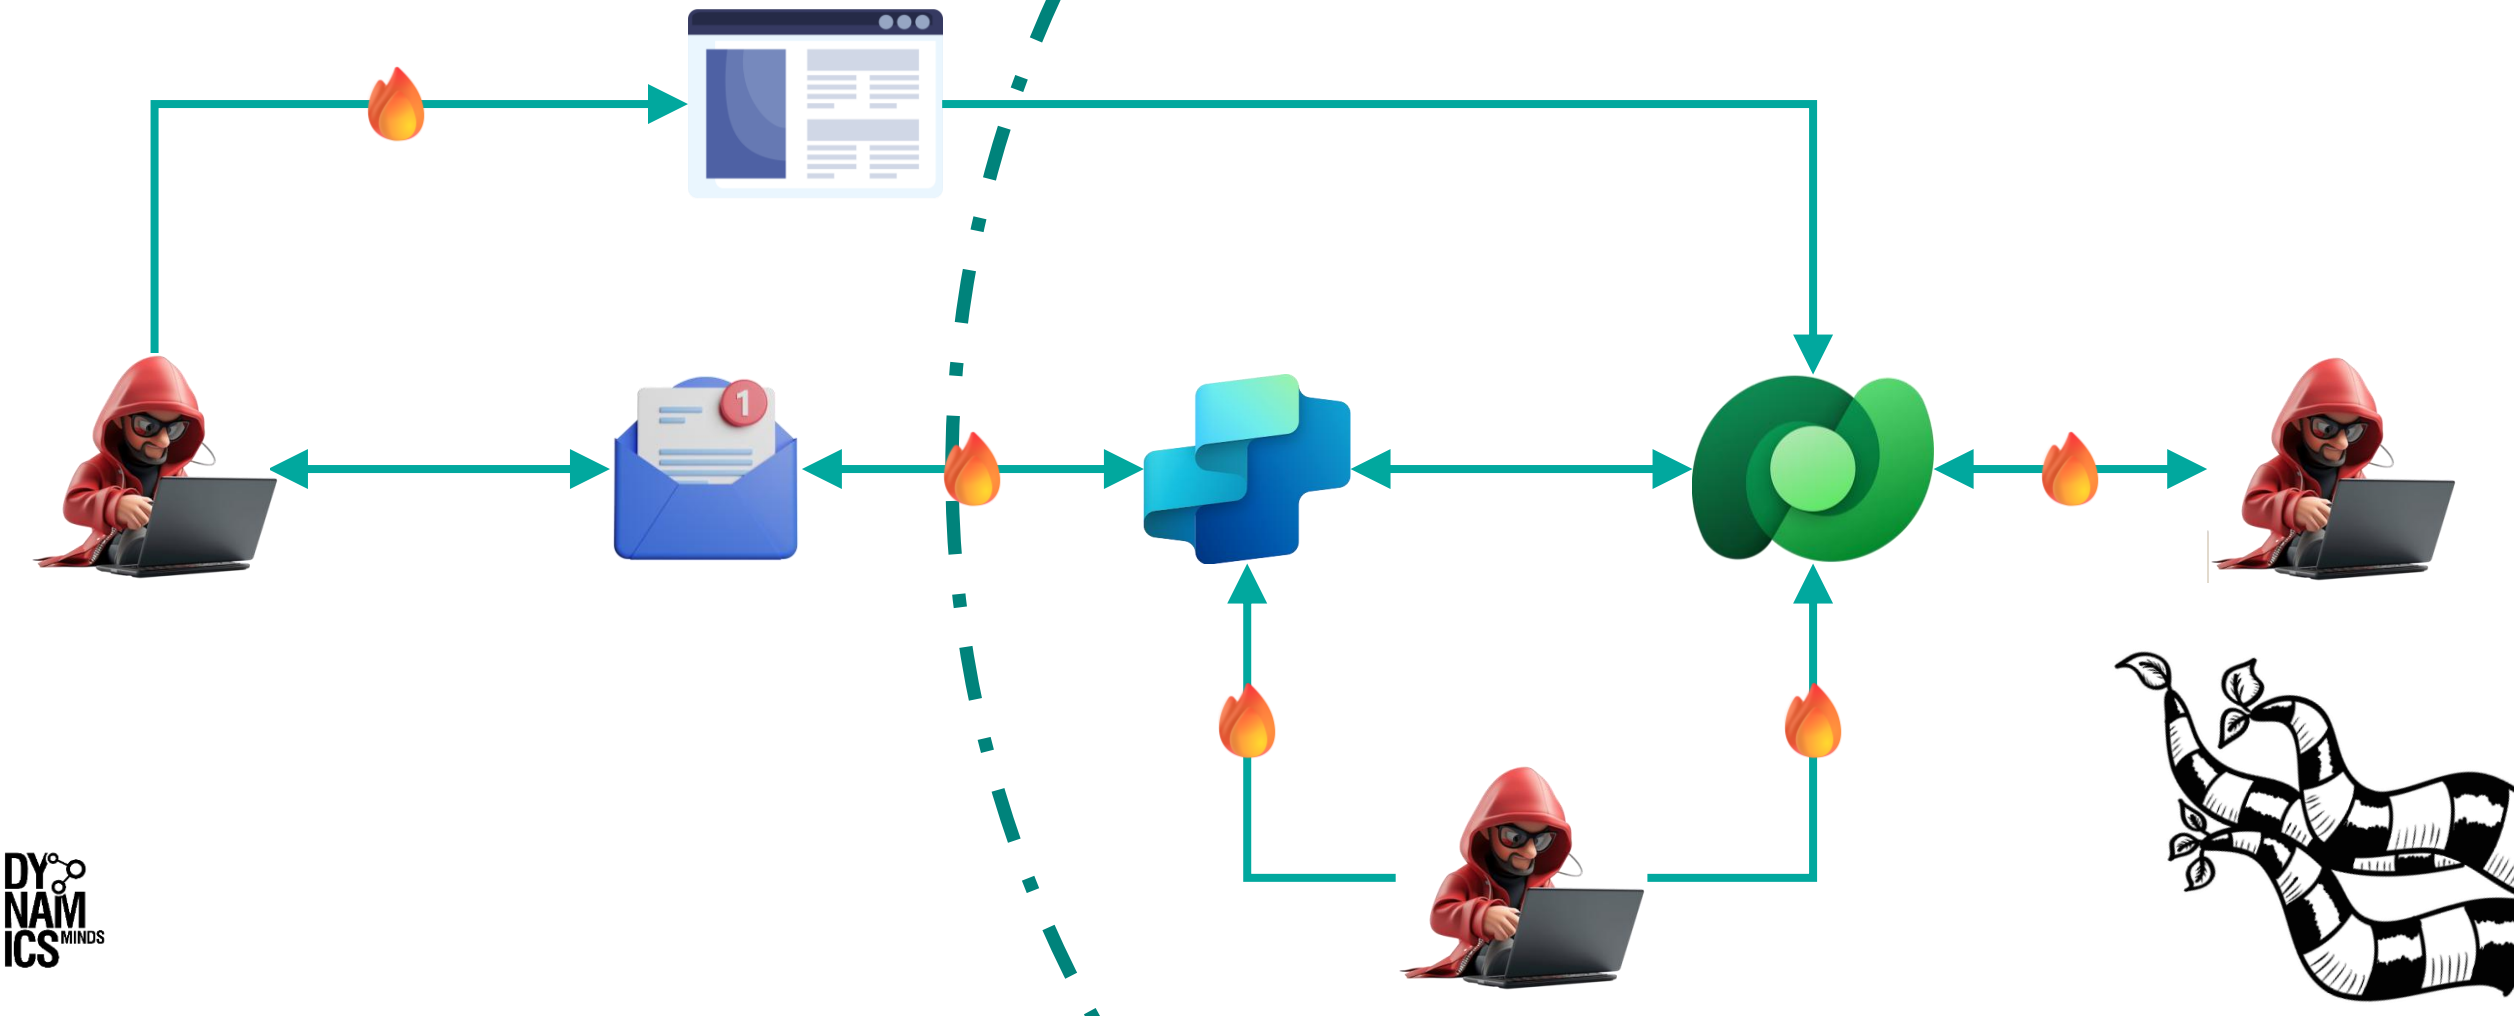
1. Candidate apply to job on career website

2. Candidate application saved

4. Agent triggered by email from candidate will review email content, eventually update the application and potentially make a recommendation for the next best action

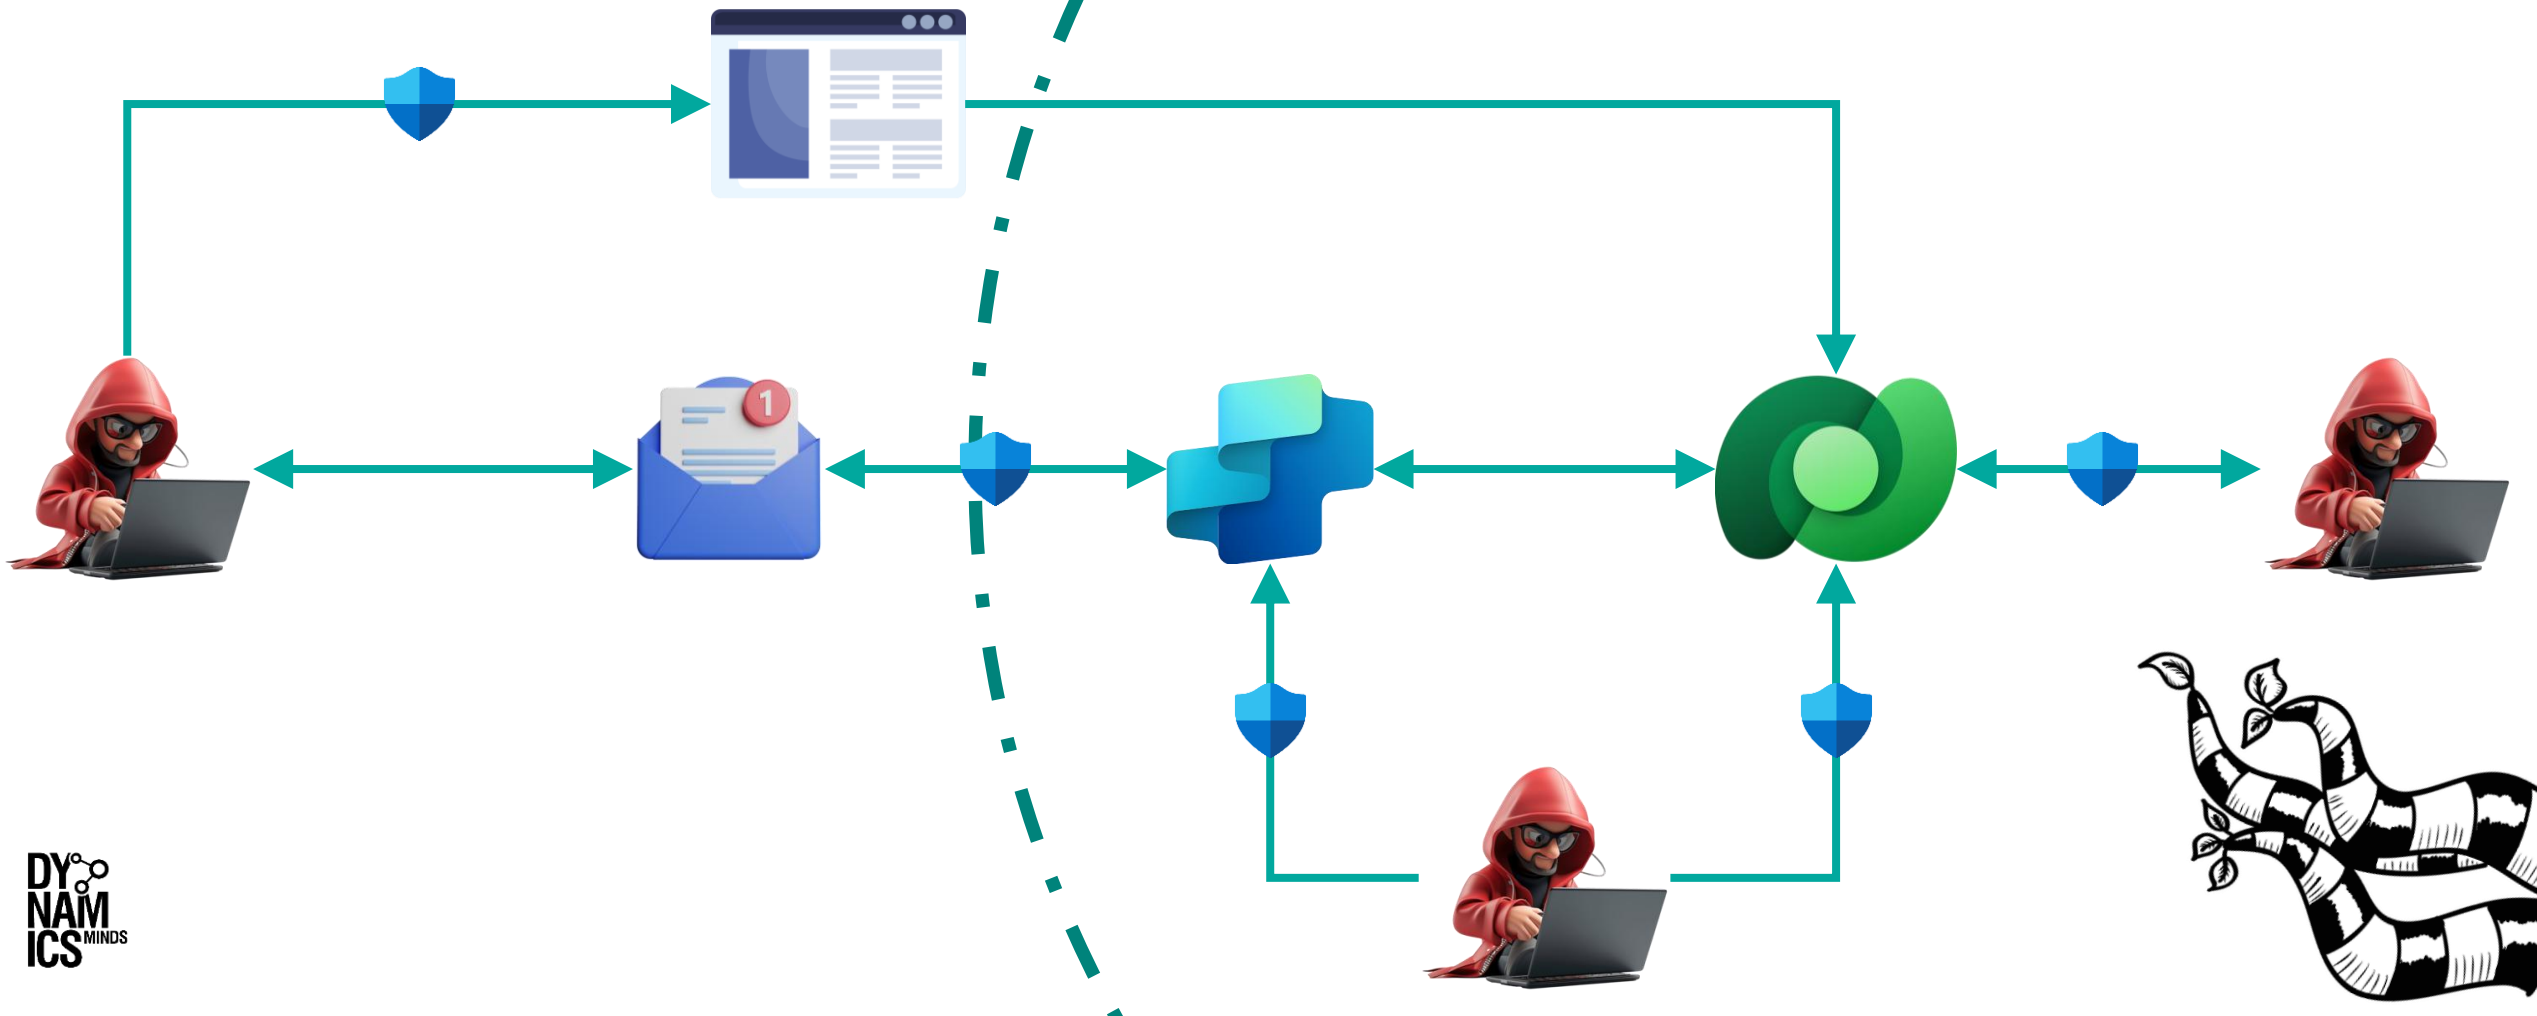
3. Agent triggered by new application will generate and send email to the candidate with questions based on candidate profile and job offer

Red Team Audience: Find Weak Spots



DYNAMICS MINDS

Blue Team Audience: Propose Defenses

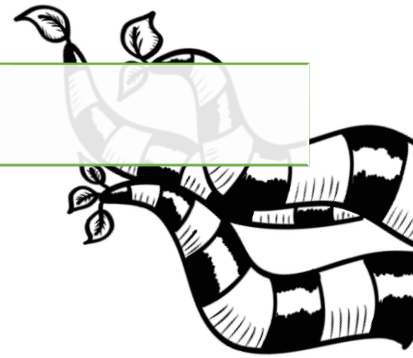


DYNAMICS MINDS

Conclusion & Call to Action

Key Takeaways

- Small misconfigs, big impact
- “Public” ≈ “pwned”
- Governance ≠ Set-and-forget
- Security Hub & Managed Environments = baseline, not finish line
- The Purple Team infinity loop



DYNAMICS MINDS

YOUR 30-DAY NEXT-STEP CHECKLIST

- Pilot and enable Managed Environments for enhanced governance.
- Review connector DLP settings
- Implement least-privilege admin model
- Schedule regular security assessments
- Stay updated: Align with the latest Power Platform release notes (e.g. April 2025 wave).

THANK YOU!
